

# Hair loss and Endocrine Disruptors Research (HER) Study

## STUDY OBJECTIVES

Investigate the association between Central centrifugal cicatricial alopecia (a type of hair loss that is very common in Black/African American women), and urinary phthalate metabolite concentrations.

Examine whether treatment for CCCA decreases the urinary phthalate metabolite levels

We hope to obtain a better understanding of the pathogenesis of CCCA that will aid in preventive measures and management.

## Who is eligible?

African American/Black female patients with biopsy-confirmed Central centrifugal cicatricial alopecia (CCCA)

African American/Black females without alopecia

## What do I need to do?

Complete a questionnaire and provide a urine sample at each of two-time points

## Will I receive compensation?

Yes, up to \$20 in compensation for your time and participation in the study
